## Bank note Validators

BillCoin Bank note validators are designed to be easy to use, configure and implement into existing or new systems. The materials chosen are chosen to ensure a long product lifetime and long service intervals. Other considerations during the design process have been high resistance against theft and other none-standard actions.

### BCD-24 STD, with pull out unit std. Article no.: 8488001-401 STD

The standard pull out unit is used in all occasions with or with out stacker.

### BCD-24 DW, with pull out unit with lower pulley flanged Article no.: 8488001-401 DW

The pull out unit with the lower pulley flanged is used in combination with a drop box. The flanges on the pulley bend the note somewhat and makes it stiffer in the transportation direction. This ensures the transportation into the drop box.

### BCD-24 RAK, with horizontal pull out unit Article no.: 8488001-401 RAK

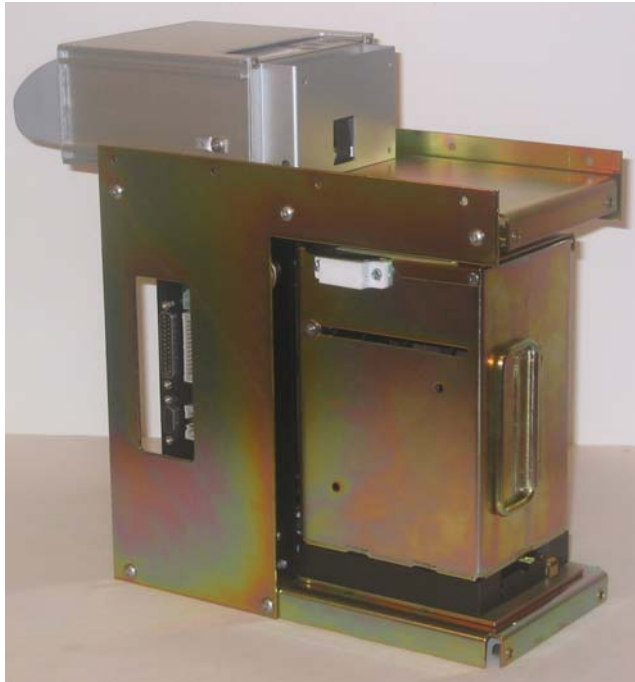

This pull out unit is to be used when it is desired that the note should be feed horizontally into any kind of box placed behind the validator.
